volume 10

In Memoriam
Ray Solomonoff (1926-2009)

The Great Ray Solomonoff, pioneer of Machine Learning, founder of Algorithmic Probability Theory, father of the Universal Probability Distribution, creator of the Universal Theory of Inductive Inference, passed away on Monday 30 November 2009, from complications in the wake of a broken aneurism in his head. He is survived by his loving wife, Grace.

Ray Solomonoff was the first to describe the fundamental concept of Algorithmic Information or Kolmogorov Complexity, and the first to prove the celebrated Invariance Theorem. In the new millennium his work became the foundation of the first mathematical theory of Optimal Universal Artificial Intelligence.

Ray intended to deliver an invited lecture at AGI 2010, the Conference on Artificial General Intelligence (March 5-8, 2010) in Lugano (where he already spent time in 2001 as a visiting professor at the Swiss AI Lab IDSIA). The AGI conference series would not even exist without his essential theoretical contributions. With great sadness AGI 2010 was held «In Memoriam Ray Solomonoff».

Ray will live on in the many minds shaped by his revolutionary ideas.

Eulogy by Jürgen Schmidhuber

This book is part of the series *Advances in Intelligent Systems Research* (ISSN: 1951-6851) published by Atlantis Press.

Aims and scope of the series

During the past decade computer science research in understanding and reproducing human intelligence has expanded from the more traditional approaches like psychology, logics and artificial intelligence into multiple other areas, including neuroscience research. Moreover, new results in biology, chemistry, (surface) physics and gene technology, but also in network technology are greatly affecting current research in computer science, including the development of intelligent systems. At the same time, computer science's new results are increasingly being applied in these fields allowing for important cross-fertilisations. This series aims at publishing proceedings from all disciplines dealing with and affecting the issue of understanding and reproducing intelligence in artificial systems. Also, the series is open for publications concerning the application of intelligence in networked or any other environment and the extraction of meaningful data from large data sets.

Research fields covered by the series include: * Fuzzy sets * Machine learning * Autonomous agents * Evolutionary systems * Robotics and autonomous systems * Semantic web, incl. web services, ontologies and grid computing * Biological systems * Artificial Intelligence, incl. knowledge representation, logics * Neural networks * Constraint satisfaction * Computational biology * Information sciences * Computer vision, pattern recognition * Computational neuroscience * Datamining, knowledge discovery and modelling for e.g. life sciences.

Preface

Artificial General Intelligence (AGI) research focuses on the original and ultimate goal of AI - to create broad human-like and transhuman intelligence, by exploring all available paths, including theoretical and experimental computer science, cognitive science, neuroscience, and innovative interdisciplinary methodologies. Due to the difficulty of this task, for the last few decades the majority of AI researchers have focused on what has been called *narrow AI* - the production of AI systems displaying intelligence regarding specific, highly constrained tasks. In recent years, however, more and more researchers have recognized the necessity - and feasibility - of returning to the original goals of the field. Increasingly, there is a call for a transition back to confronting the more difficult issues of *human level intelligence* and more broadly *artificial general intelligence*.

The Conference on Artificial General Intelligence is the only major conference series devoted wholly and specifically to the creation of AI systems possessing general intelligence at the human level and ultimately beyond. Its third installation, AGI-10, in Lugano, Switzerland, March 5-8, 2010, attracted 66 paper submissions. Of these submissions, 29 (i.e., 44%) were accepted as full papers, additional 12 were accepted as short position papers, which was a more selective choice than for AGI-09 in Arlington, Virginia. Both full and short papers are included in this collection. The papers presented at the conference and collected in these proceedings address a wide range of AGI-related topics such as Universal Search, Cognitive and AGI Architectures, Adaptive Agents, special aspects of reasoning, the formalization of AGI, the evaluation of AGI systems, machine learning for AGI, and implications of AGI. The contributions range from proven theoretical results to system descriptions, implementations, and experiments to general ideas and visions.

The conference program also included a keynote address by Richard Sutton and an invited lecture by Randal Koene. Richard Sutton is a Professor at the University of Alberta. The co-author of the textbook «Reinforcement Learning: an Introduction», has made numerous contributions to the fields of AI and learning. His talk was on *Reducing Knowledge to Prediction*. The idea is to formalize and reduce knowledge about the world to predictive statements of a particular form that is particularly well suited for learning and reasoning. He presented new learning algorithms in this framework that his research group has developed. Randal Koene is the Director of the Department of Neuroengineering at Tecnia. His talk was on *Whole Brain Emulation: Issues of scope and resolution, and the need for new methods of in-vivo recording*.

Finally, the conference program included a number of workshops on topics such as formalizing AGI and the future of AI, pre-conference tutorials on various AGI-related topics, and an AGI-systems demonstration.

Producing such a highly profiled program would not have been possible without the support of the community. We thank the (local) organizing committee members for their advise and their help in all matters of actually preparing and running the event. We thank the program committee members for a smooth review process and for the high quality of the reviews - despite the tight review phase and the fact that due to the high number of submissions the review load per PC member was considerably higher than originally expected. And we thank all participants for submitting and presenting interesting and stimulating work, which is the key ingredient needed for a successful conference. We also gratefully acknowledge the support of a number of sponsors:

- Association for the Advancement of Artificial Intelligence (AAAI)
- KurzweilAI.net (Kurzweil Best Paper Prize and Kurzweil Best Idea Prize)
- The University of Lugano, Faculty of Informatics (scientifically endorses AGI-10)

March 2010

Marcus Hutter (Conference Chair)

Eric Baum, Emanuel Kitzelmann (Program Committee Chairs)

Conference Organization

Chairs

Marcus Hutter (Conference Chair)	Australian National University, Australia
Jürgen Schmidhuber (Local Chair)	IDSIA, Switzerland
Eric Baum (Program Chair)	Azure Sky Research Inc., USA
Emanuel Kitzelmann (Program Chair)	University of Bamberg, Germany

Program Committee

Igor Aleksander	Imperial College London, UK
Lee Altenberg	University of Hawaii at Manoa, USA
Itamar Arel	University of Tennessee, Knoxville, USA
Sebastian Bader	Rostock University, Germany
Eric Baum	Azure Sky Research Inc., USA
Anselm Blumer	Tufts University, USA
Hugo de Garis	Xiamen University, China
Wlodek Duch	Nicolaus Copernicus University, Poland
Artur Garcez	City University London, UK
J. Storrs	Hall Institute for Molecular Manufacturing, USA
Benjamin Johnston	University of Technology, Sydney, Australia
Bert Kappen	Radboud University, The Netherlands
Emanuel Kitzelmann	University of Bamberg, Germany
Kai-Uwe Kühnberger	University of Osnabrück, Germany
Christian Lebiere	Carnegie Mellon University, USA
Shane Legg	University College London, UK
Moshe Looks	Google Research, USA
András Lőrincz	Eötvös Loránd University, Hungary
Hassan Mahmud	Australian National University, Australia
Eric Nivel	Reykjavik University, Iceland
Jan Poland	ABB Research, Zurich, Switzerland
Brandon Rohrer	Sandia National Laboratory, USA
Sebastian Rudolph	University of Karlsruhe, Germany
Robert Schapire	Princeton University, USA
Lokendra Shastri	Infosys Technologies Ltd, India
Ray Solomonov	Oxbridge Research, Cambridge, USA
Rich Sutton	University of Alberta, Canada
Kristinn Thorisson	Reykjavik University, Iceland

Lyle Ungar	University of Pennsylvania, USA
Les Valiant	Harvard University, USA
Marco Wiering	University of Groningen, The Netherlands
Mary-Anne Williams	University of Technology, Sydney, Australia
David Wolpert	NASA, USA

Organizing Committee

Tsvi Achler	University of Illinois at Urbana Champaign, USA
Eric Baum	Azure Sky Research Inc., USA
Sarah Bull	NICTA, Australia
Ben Goertzel	Novamente LLC, USA
Marcus Hutter	Australian National University, Australia
Emanuel Kitzelmann	University of Bamberg, Germany
David Orban	Singularity University, USA
Stephen Reed	Texai.org, USA

Local Organizing Committee

Carlo Lepori	CFO of IDSIA
Mauro Pezze	Dean of the Faculty of Informatics of USI
Jürgen Schmidhuber	IDSIA
Albino Zraggen	CFO of the University of Lugano/USI
