Solomonoff Induction

Let U be a universal monotone Turing machine.

Solomonoff's universal prior [Solomonoff, 1964]:

$$M(x) := \sum_{p: U(p)=x...} 2^{-|p|}$$

M is a probability distribution on $\mathcal{X}^\infty \cup \mathcal{X}^*$

Solomonoff Induction

Let U be a universal monotone Turing machine.

Solomonoff's universal prior [Solomonoff, 1964]:

$$M(x) := \sum_{p: U(p)=x...} 2^{-|p|}$$

M is a probability distribution on $\mathcal{X}^\infty \cup \mathcal{X}^*$

Solomonoff normalization: $M_{
m norm}(\epsilon) := 1$ and

$$M_{
m norm}(xa) := M_{
m norm}(x) rac{M(xa)}{\sum_{b \in \mathcal{X}} M(xb)}$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

 $M_{
m norm}$ is a probability distribution on \mathcal{X}^∞

Observe (non-iid) data $x_{< t} := x_1 x_2 \dots x_{t-1} \in \mathcal{X}^*$, predict

 $\operatorname*{arg\,max}_{a \in \mathcal{X}} M(a \mid x_{< t})$

Observe (non-iid) data $x_{< t} := x_1 x_2 \dots x_{t-1} \in \mathcal{X}^*$, predict

$$rgmax_{a\in\mathcal{X}} M(a \mid x_{< t})$$

At most E + O(√E) errors when observing data from a computable measure µ (E = errors of the predictor that knows µ) [Hutter, 2001]

Observe (non-iid) data $x_{< t} := x_1 x_2 \dots x_{t-1} \in \mathcal{X}^*$, predict

$$rgmax_{a\in\mathcal{X}} M(a \mid x_{< t})$$

- At most E + O(√E) errors when observing data from a computable measure µ (E = errors of the predictor that knows µ) [Hutter, 2001]
- M merges with any computable measure μ [Blackwell and Dubins, 1962]:

 $\sup_{H} |M(H \mid x_{\leq t}) - \mu(H \mid x_{\leq t})| o 0$ μ -a.s. as $t o \infty$

Observe (non-iid) data $x_{< t} := x_1 x_2 \dots x_{t-1} \in \mathcal{X}^*$, predict

$$rgmax_{a\in\mathcal{X}} M(a \mid x_{< t})$$

- At most E + O(√E) errors when observing data from a computable measure µ (E = errors of the predictor that knows µ) [Hutter, 2001]
- M merges with any computable measure μ [Blackwell and Dubins, 1962]:

$$\sup_{H} |M(H \mid x_{\leq t}) - \mu(H \mid x_{\leq t})| o 0$$
 $\mu ext{-a.s.}$ as $t o \infty$

• *M* is lower semicomputable, but M(xy | x) is incomputable

Observe (non-iid) data $x_{< t} := x_1 x_2 \dots x_{t-1} \in \mathcal{X}^*$, predict

$$rgmax_{a\in\mathcal{X}} M(a \mid x_{< t})$$

- At most E + O(√E) errors when observing data from a computable measure µ (E = errors of the predictor that knows µ) [Hutter, 2001]
- M merges with any computable measure μ [Blackwell and Dubins, 1962]:

$$\sup_{H} |M(H \mid x_{\leq t}) - \mu(H \mid x_{\leq t})| o 0$$
 $\mu ext{-a.s.}$ as $t o \infty$

• *M* is lower semicomputable, but M(xy | x) is incomputable

 \implies *M* is really good at learning

Resolving the Paradox of Confirmation II

In the literature there are perhaps 100 'paradoxes' and controversies which are like this, in that they arise from faulty intuition rather than faulty mathematics. Someone asserts a general principle that seems to him intuitively right. Then, when probability analysis reveals the error, instead of taking this opportunity to educate his intuition, he reacts by rejecting the probability analysis.

[Jaynes, 2003, p. 144]
